Project Report: Recipe Finder Portfolio

[Leon Langat]

July 2, 2025

1. Portfolio and GitHub Links

- Portfolio Website: https://Leonkim879.github.io/recipe-finder
- GitHub Repository: https://github.com/Leonkim879/recipe-finder

2. Website and Repository Structure

The project consists of the following files:

- `index.html` – The main homepage of the Recipe Finder app.
- `about.html` – A separate About Me page.
- `style.css` – Styling for the website.
- `script.js` – JavaScript logic for searching and displaying recipes.

GitHub mirrors this exact structure, making it easy to update and track changes.

3. Design Decisions

I chose a minimal and clean design to make the recipe content stand out. The color scheme uses warm tones (like orange and beige) to create a welcoming food-themed feel. Navigation between pages is simple and intuitive.

4. Tools and Technologies Used

- **VS Code** – Code editor for writing and managing files.
- **HTML/CSS/JavaScript** – The core technologies for building the web app.
- **GitHub** – For version control and online hosting.

5. Reflection and Future Improvements

Strengths:

- Simple UI, easy to use

- Organized file structure

- Works without any external libraries

Improvements I would like to make:

- Add images for recipes

- Store data in a JSON file or external API

- Make the site responsive for mobile

- Add animations or a theme switcher
